

## **ROADS-to-FORDS Conversion of Lymph Node Primary Lymphomas: Errata**

It has been called to the attention of CoC that the conversion of certain surgery codes for lymphomas with a lymph node primary site, as calculated by the CoC ROADS-to-FORDS conversion program, may cause the converted cases to fail some standard edits. The following across-the-board modifications to your converted data will correct the problem.

Apply the following to converted instances of lymphomas (ICD-O-2 and/or ICD-O-3 morphology range 9590-9596, 9650-9719, 9727-9729) having lymph node primary sites (C77.0-C77.9):

1. Set *Surgical Margins of the Primary Site* (NAACCR Item # 1320) = 9
2. If *Surgical Procedure of the Primary Site* (NAACCR Item # 1290) = 00 AND *Surgical Procedure/Other Site* (NAACCR Item # 1294) = 0, then set *Date of First Surgical Procedure* (NAACCR Item # 1200) = 00000000.
