INDEX TO THE PUBLICATIONS OF THE AMERICAN COLLEGE OF SURGEONS SINCE ITS FOUNDING 1913-1945

PREPARED BY THE DEPARTMENTS OF PUBLIC RELATIONS AND PUBLICATIONS

AN INDEX is to all appearances a dull and lifeless piece of printed matter, with utilitarian value only. The one which appears in the following pages will, however, have for most readers of the BULLETIN an intriguing quality that will prompt them to read it fairly carefully and to treasure it for frequent reference. The reason is that even in this driest possible form of presentation, there is told the absorbing story of the beginnings and growth of what is now a great institution. This index to the publications is a key to the biography of the American College of Surgeons, in whose development these very readers have in many instances played an important part.

To some, it will bring reminders of the early days of struggle to get started what then seemed a quite audacious venture in organization. To others, the newer Fellows, it will give insight into the fact that the College, like Rome, was not built in a day. Courageous purpose, thoughtful planning and vision, and energetic action to transform ideas into working programs, are obvious just from scanning the titles of the reports and articles that have been prepared and published since the College was founded. Thirty-three years of striving to elevate the standards of surgery are here mirrored in index form, with impressive results in the volume of ma-

terial, the number of authors, and the scope and variety of subjects listed.

The lack of an index to the publications of the College has been keenly felt for many years and work on it has been done spasmodically over a long period. A large number of requests have been received, particularly from libraries, for such a guide, and the need for it within the organization as well has spurred the task on to completion. While the main endeavor has been to cover the contents of the BULLETIN during its thirty years of existence, it seemed desirable to include a considerable number of references to the *College Year Book*, the *Manual of Hospital Standardization*, the *Directory of Graduate Training Programs*, the handbook on *Medical Service in Industry and Workmen's Compensation Laws*, the *Outline of the Treatment of Fractures*, and several other special publications or reports.

For convenience in reference, the index is divided into two parts—the first section according to authors, and the second according to subjects. Cross-indexing has been carried out as far as seemed feasible, but under the subject heading, "American College of Surgeons," a great many references will be found which are not listed elsewhere in the subject index. Another major subject under which numerous subsidiary references are listed is "Hospitals."
