

American College of Surgeons

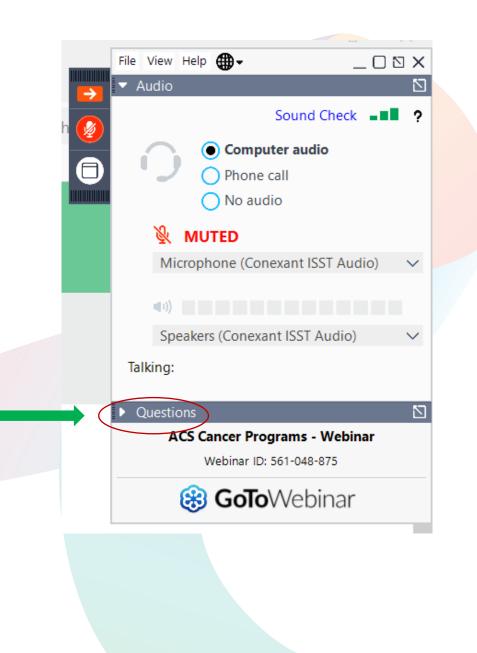

## Beyond ASK: Advising and Assisting Using a Multi-layer Approach

May 19, 2023

Logistics

- All participants are muted during the webinar
- Questions including technical issues you may be experiencing – should be submitted through the question pane
- Questions will be answered as time permits; additional questions and answers will be posted on the website
- Please complete the post-webinar evaluation you will receive via email

#### **Introducing our Moderator and Panelists**

**Timothy Mullett, MD, MBA, FACS** Thoracic Surgery, University of Kentucky Markey Cancer Center, Kentucky Chair, Commission on Cancer

Audrey Darville, PhD, APRN, NCTTP, FAANP Associate Professor, University of Kentucky College of Nursing Family Nurse Practitioner, Certified Tobacco Treatment Specialist

Danielle McCarthy, PhD Director for Implementation and Health Services Research University of Wisconsin Center for Tobacco Research and Intervention

Patsy Astarita, LCSW-C, OSW-C, APHSW-C Director, Oncology Integrated Health UM Upper Chesapeake Medical Center; Kaufman Cancer Center University of Maryland Medical Systems

#### Agenda

- Welcome
- Data review: A brief overview
- Beyond ASK: Assisting and Referrals
- Examples from the Field
- What to expect next
- Q & A

American College of Surgeons

## **Baseline Data**

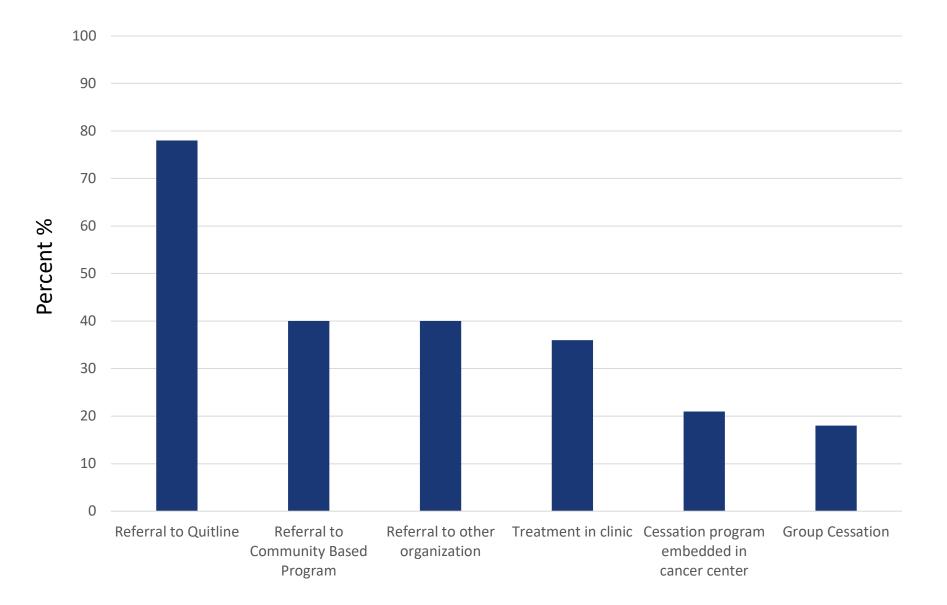

Timothy Mullett

## **Key Takeaways**

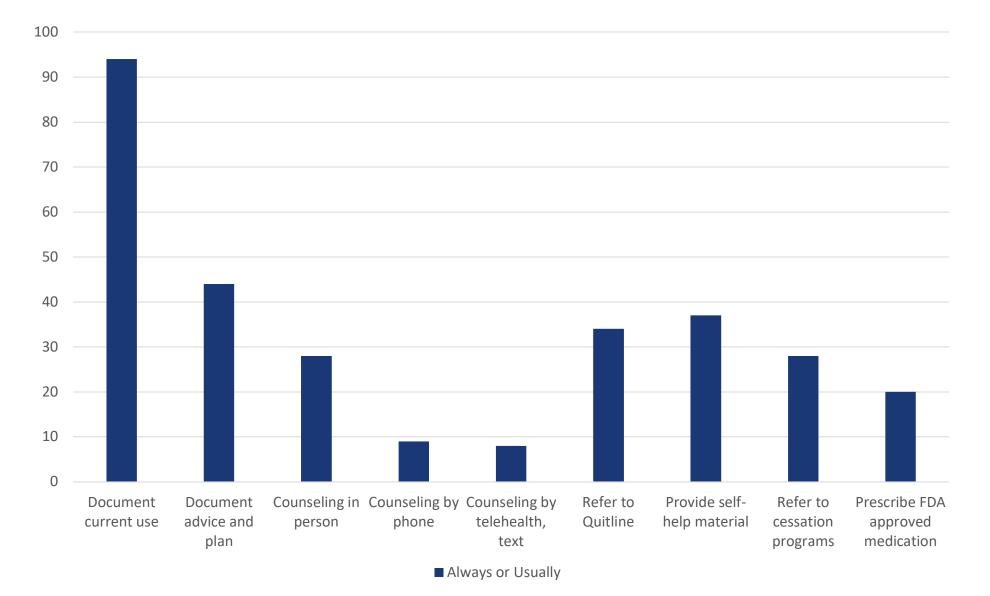

- 87% previously participated in Just ASK
- 96% of programs have a system for screening for smoking history and current use
  - 84% ALWAYS ask about smoking
  - 44% ALWAYS advise patients about smoking
  - 22% ALWAYS assist patients who are currently smoking to quit

## **Available Resources**

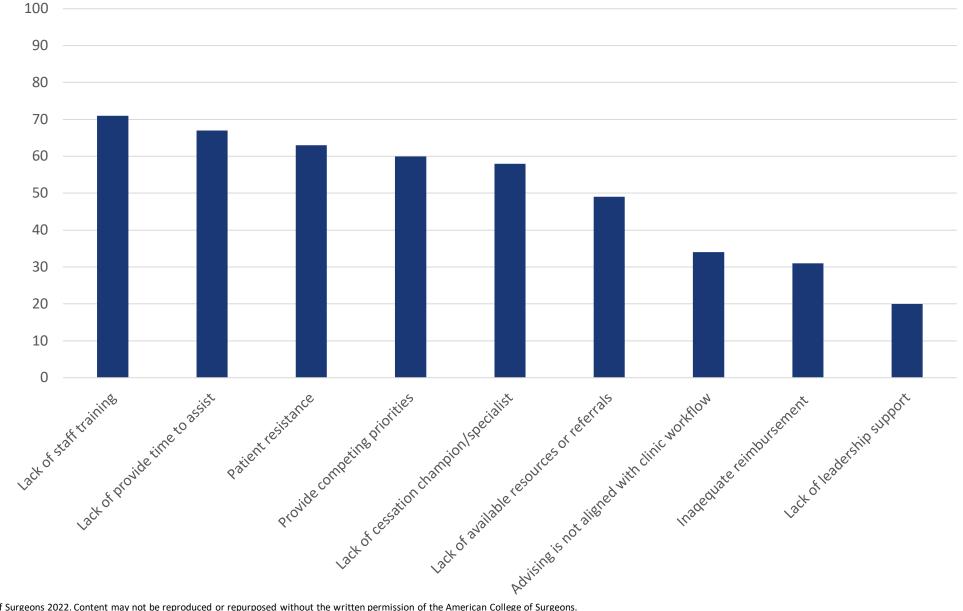

## **Current Practices**

## **Perceived Barriers**

© American College of Surgeons 2022. Content may not be reproduced or repurposed without the written permission of the American College of Surgeons.

## **Implementation strategies**

100 90 80 70 60 50 40 30 20 10 0 Train staff and Gain support of Alter workflow Develop patient ed Identify champion Modify EHR Improve leadership clinicans documentation

What interventions are you considering?

Parital or full Contemplating Not Implementing

## **Data Metrics**

- 84% of respondents included only *newly* diagnosed patients
- 90% of patients seen during this time were ASKED about current smoking use and history
  - Of those patients, 35% reported they currently smoke
    - Of those patients, 19% were provided with cessation assistance
- How are you assisting?

Assist type	Most or nearly all
In office brief counseling	41%
Referral to Quitline	27%
"In house" referral	14%
Community referral	13%
Web based referral	10%
Medication prescription	8%
In office behavioral counseling	8%

American College of Surgeons

## **Assisting and Referrals**

Audrey Darville and Danielle McCarthy

## Beyond Ask: Assisting and Referrals

#### DETERMINE WHAT RESOURCES ARE AVAILABLE TO ASSIST PATIENTS TO QUIT SMOKING

a. Can patients be accorded by chriccal staff in-christ? b. we there institutional (in house) sincking consistent programs to you can teller patients for treatment? r. Are community resources available to accord patients with sufferg?

"One same the proof to the same quaterar". "One same does not fit all and there are multiple ways to help make quit smoking.

#### CHOOSE AN ASSIST PATHWAY THAT WILL WORK FOR YOUR PROGRAM

a. ADDISTING can include referring patients to an evidence based treatment program or density assisting desailing) patients in clima, or by phone b. Smaller centers thequeinty either treat patients in clima; or refer to communit manufacts or quittings.

- E cargor content thequently have smoking costation programs
- Build removalers or Regular failure up with patients as needed
- Discore a method that it is hashin and fits into your clinical workflows an will be sustainable long term.

## **Fundamental Tenets**

- Every patient should be encouraged to reduce smoking and/or make a quit attempt using counseling and medications
- Brief cessation advice and counseling is effective, and should be offered to every patient, whether or not they express interest in quitting

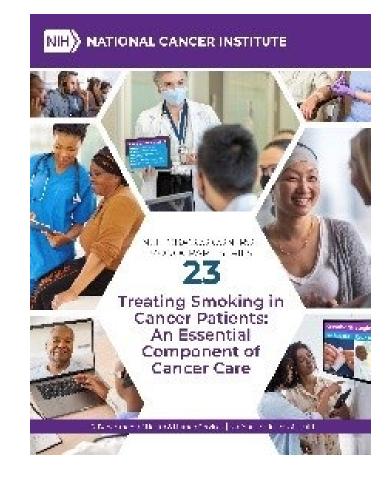

## Ask, Advise, Assist/Refer/Connect to Treatment

- Offer counseling/medication to all tobacco users (**Opt-out model**)
- Connect tobacco users to existing behavioral supports (tobacco treatment services, quitline, online, community cessation groups) using proactive referral process

(see Rigotti, N. A., Kruse, G. R., Livingstone-Banks, J., & Hartmann-Boyce, J. (2022). Treatment of Tobacco Smoking: A Review. JAMA, 327(6), 566-577. doi:10.1001/jama.2022.0395)

## Barriers and Concerns

- Healthcare Professionals (HCPs) may lack the time & training to help patients quit smoking.
- "Ask" & "Advise" is improving but "Assist" & "Arrange" remain a struggle for many.
- Most people try to quit multiple times before achieving abstinence, which can be discouraging.
- Inadequate or confusing cessation insurance coverage may further frustrate HCPs.
- In the absence of well-designed systems, HCPs may be inconsistent in delivering cessation treatment.
- Patients don't think they receive good care if their tobacco use is not addressed.

We encourage all our patients to use tobacco treatment because we know that helping our patients reduce or quit using tobacco helps us treat their cancer. I want to work with you to reduce your tobacco use so your cancer treatment works better. Let's look at this list of resources that we know help. Which appeal to you?

#### **ASSIST** with the quit attempt

I know quitting can be hard. I have treatments that can help you get started. Why don't you think about trying it. Quitting tobacco is one of the most important things you can do to help your cancer treatment. I'm going to ask our quitline to call you.

Individual, group, and telephone counseling effectiveness increases with treatment intensity

At least 4 or more behavioral counseling sessions are billable

Evidence is growing for e-Health intervention effectiveness, but sparse for persons with cancer

© American College of Surgeons 2022. Content may not be reproduced or repurposed without the written permission of the American College of Surgeons.

## **Treatment Models to Consider**

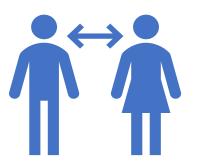

Point of care: Train persons already interacting with patients to offer brief counseling and referral/follow-up

#### Internal Referral to an

in-house tobacco treatment program, generally staffed as trained Tobacco Treatment Specialists

#### **External Referrals**

to quitline, community cessation programs, or other e-Health options

## C3I Resources Presentation

#### C3I Roadmap Welcome

Welcome to the C3I Roadmap for Tobacco Treatment in Cancer Care. This resource was developed by the <u>Cancer Center Cessation Initiative (C3I)</u>, funded by the National Cancer Institute. The national C3I program is designed to help patients with cancer quit using tobacco. The organization of the Roadmap was adapted from the <u>Goodrich et al., 2020 U.S.</u> <u>Department of Veterans Affairs Quality Enhancement</u>

Research Initiative Roadmap, and its content reflects lessons learned during the C3I effort to incorporate tobacco treatment as a pillar of cancer care and utilizes other existing resources and toolkits. This Roadmap is designed for diverse clinical cancer care settings, including community cancer programs.

#### **Objective:**

Help cancer clinics identify, adapt, and implement electronic health record (EHR) and other tools to deliver evidence-based smoking cessation treatment strategies to patients who use tobacco.

#### Register or Login to Access the Roadmap here. Free registration is required to help us track utilization of this Roadmap.

#### Solutions: Integrating Tobacco Treatment in Cancer Care

Cancer treatment programs can help patients quit using tobacco. Tobacco treatment for cancer patients can be delivered at the clinic, at 'the point of care,' and through referrals to external treatment programs. This Roadmap provides sample screening, treatment, and referral workflows and tools that you can adapt for your cancer clinic.

See our Case Studies for examples of successful programs.

Successful programs that address tobacco use share the following key features:

- They SCREEN all cancer patients and survivors for tobacco use at regular intervals. They ask patients about tobacco use in an empathic and non-stigmatizing manner (<u>Riley et al.,</u> 2017; <u>Ostroff et al., 2022</u>).
- They TREAT all patients who use tobacco with both pharmacotherapy and psychosocial support or counseling (Fiore et al., 2008; Leone et al., 2020; National Comprehensive Cancer Network, 2022; NCI, 2022). They design programs to minimize barriers to

#### Tip

Engage a multidisciplinary team to identify who (e.g., nurses, oncologists, pharmacists, medical assistants, tobacco treatment specialists) has the best access to patients and capacity to offer tobacco treatment or referral in your system.

Target Population: Who are you trying to reach?

Expand all | Collapse all

#### + New cancer patients

- Established cancer patients

For established patients, think about how often you want to screen for tobacco use and offer treatment. Prompting these actions at every visit may be too often for some patients (e.g., those receiving daily radiation). However, addressing tobacco use only once at an initial visit will miss opportunities to engage with patients about their tobacco use.

Programming suppression rules in the EHR for program-related alerts can help you set the periodicity for treatment activities (e.g., suppressing an alert for 90 days after a referral to treatment is placed, or 30 days after treatment is declined). See <u>sample EHR alerts</u> for routine clinical encounters.

## **Treatment Resources**

Home / Oncology Tobacco Treatment Implementation Roadmap / Pre-Implementation Module / Tobacco Treatment Tools and Workflows

#### **Tobacco Treatment Tools and Workflows**

Extensive evidence supports the effectiveness of tobacco cessation interventions, and guidelines and decision aids have been developed to guide treatment (<u>Centers for Disease</u> <u>Control and Prevention, 2016</u>; <u>Fiore et al., 2008</u>; <u>Leone et al., 2020</u>), including in cancer care (<u>National Comprehensive Cancer Network, 2022</u>; login required).

Whether the care is delivered remotely, in clinic, or in the hospital, evidence-based tobacco treatment goes beyond simple advice and patient education. An evidence-based tobacco treatment program includes a minimum of brief counseling (face-to-face or remote, individual or group) and pharmacotherapy.

Treatment extenders such as state tobacco quitlines, the <u>SmokefreeTXT</u> texting program (National Cancer Institute; <u>www.smokefree.gov</u>), and interactive voice response (IVR) systems are also evidence-based and can provide psychosocial support in settings with limited

Tip

One size does not fit all. Adapt a tobacco treatment program to work in your setting.

## **Working with Patients at a Difficult Time**

Motivational Interviewing (MI) is particularly useful to help people examine their situation and options when any of the following are present:

- Importance is low and the benefits of change and disadvantages of the current situation are unclear
- Confidence is low and people doubt their abilities to change
- Ambivalence is high and people are stuck in mixed feelings about change

Increasing Importance	Increasing Confidence	Addressing Ambivalence
"One of the most important things you can do to help your cancer treatment is to stop using tobacco, and I can help you. We can start by using medication and counseling to change your tobacco use."	"We know changing smoking is hard, that's why we're talking to you today. We have treatments that can help."	"Quitting can improve your cancer care and may help your family, too. We can help you change your tobacco use by recommending some resources to support you."

# Quitlines

- Provide evidence-based behavioral counseling and support over the phone to help people quit using tobacco
- Are effective and reduce barriers
- Accessible to populations with limited treatment options (e.g., those living in poverty, those who have psychiatric diagnoses, and those who are uninsured)
- Offer follow-up counseling calls; are generally free and widely available; some offer free NRT
- Can receive proactive referrals

QL counseling is provided by trained cessation specialists; uses standardized protocols, and may include several sessions delivered over one or more months

QL content may be adapted for specific populations and tailored for individual clients. Multiple languages are available.

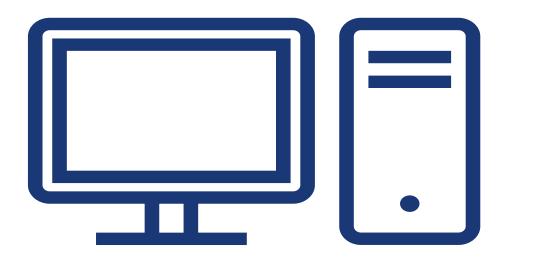

Proactive (cessation specialist makes initial contact) or

**Reactive** (tobacco user or recent quitter initiates contacts)

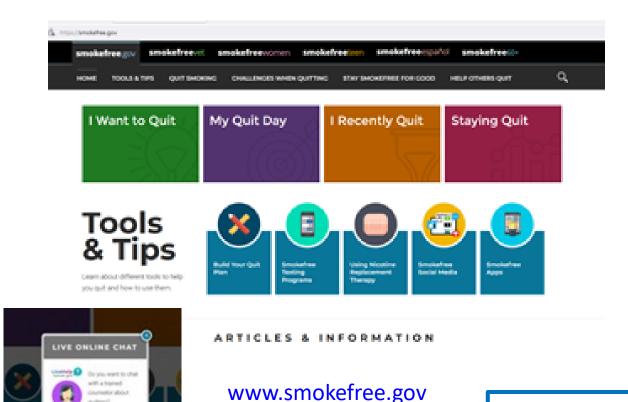

# To find information on your state quitline, see: <a href="https://www.naquitline.org/page/mapus">https://www.naquitline.org/page/mapus</a>

## E-Health/Digital Interventions for Cessation

- Use is expanding and evidence is evolving
- Multiple formats
  - Internet/website
  - Text to quit/mHealth
  - Chat-based instant messaging
  - Apps
  - Social Media
  - Interactive Voice Response (IVR)
  - Telehealth/telemedicine/video conferencing: Reduces disparities in treatment access
- Evidence of effectiveness can vary by population/motivation

TICLES & INFORMATIC

"Very useful to those of us with cancer and wanting to quit smoking!" —Chris Quit2Heal is a research study conducted by scientists at Seattle's Fred Hutchinson Cancer Center in collaboration with the American Cancer Society and Memorial Sloan Kettering Cancer Center. https://quit2heal.org/join

Specific, tailored, evidence-based recommendations are best. See the resources recommended in Beyond

Ask and take a moment to explore and show them to your patients!

#### ACS Cancer Programs American College of Surgeons

# Thinking about Tobacco Treatment Specialists?

- Have various professional backgrounds
- Possess the skills, knowledge and training to provide effective, evidence-based interventions for tobacco dependence across a range of intensities
- Provide treatment and educate others (healthcare team, administration, tobacco and non-tobacco users) about tobacco dependence treatments
- Training program information available at <u>www.ctttp.org</u>

American College of Surgeons
