

# Is your emergency department looking to improve pediatric care?

Enroll in a free data visualization and benchmarking tool

## Why it Matters

**85%**

of children are seen in general emergency departments (EDs)

**50%**

of general EDs engage in pediatric quality improvement (QI), which is one of the most important ways to improve pediatric readiness

**76%**

mortality reduction among children treated in EDs with high pediatric readiness

## About NPRQI

The National Pediatric Readiness Quality Initiative (NPRQI) empowers EDs to achieve **high pediatric readiness** by utilizing a free self-paced online QI platform. EDs use the real-time dashboards to improve pediatric emergency care using QI measures.

## Participation Benefits

- Enter basic patient information into our **secure, simple data entry platform**
- Choose from **28 nationally vetted quality metrics** focused on common pediatric presentations
- Use the data visualization dashboard to **benchmark** and track **performance over time**
- Harness **real-time data visualization** to design and implement QI interventions
- Access office hours and implementation guides to support data entry and QI initiatives
- No IT requirements or QI expertise needed!

The NPRQI is supported by the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) and the Toyota Way Forward Fund.

The University of Texas at Austin IRB has reviewed this initiative in full and determined the project to be exempt from human subject research.
