Data Items and Record Layout for Submissions to NCDB Made During 2019 Using NAACCR Layout 16.0 Specifications (CS version 02.05)
Portions of the Layout Table are highlighted in gray. Those items will not be read from the transmission file for cases diagnosed 1985-2017 that are submitted in 2019. The reason for this extra level of clarity is that the NAACCR layout has a substantial number of items for which “blank” is a valid value although the item is required to be submitted. For example, for all required date-flag pairs, one must be blank and the other filled. Therefore, the “Blank” column is insufficient by itself to represent items required for transmission to NCDB. NCDB recommends that the highlighted fields not be “blanked out” for transmission, however, for the following reasons:

- We support the concept of a shared NAACCR transmission layout, and see no value in asking software providers to re-engineer the layout for each use. **Note, however, that three physician NPI numbers are to be submitted in the state-requestor field** because NCDB does not collect or accept the confidential or text portion of the layout.
- Some highlighted items may be collected for future diagnoses, so removing them now from the record-writing apparatus is unproductive.

**Record Description**
The “I” record contains all non-confidential coded fields for each case, including demographic, tumor, staging, treatment, and follow-up. Physician NPI numbers are submitted in the State/Requestor area. There are 3,339 defined columns in the NAACCR 16.0 “I” layout.

The **Record Layout Table** identifies the data item, the length of the data item, its position in the record, its standard code format, the most current reference for the item coding instructions, and the NAACCR item number, which can be used to access data and record exchange standards published by NAACCR. Data items should be filled to the exact length indicated. Data items that may be blank are indicated in the layout.

The following symbols are used in the Record Layout Table. They are listed here by column label.

**Blank**
- **Y** item may be submitted as a blank space
- **N** item must not be submitted as a blank space
- **year** item may be blank only for cases diagnosed in the time period specified (See Record Layout Table Notes on page 4 for additional detail), for example “<96 >02” (“blank permitted if tumor was diagnosed prior to 1996 or after 2002”) for an item required by ROADS only

**Valid Format and Codes**
- **R or L** (R)ight or (L)eft justified
- **Z** (Z)ero fill
- **U** (U)pper case alpha
- **M** (M)ixed alpha-numeric
- **b** Embedded (b)lank permitted
- **“x”** Only the conditions described are accepted
- **n-n, n** Single digits, options fully designated
- **00-99** Digits only; check references for valid codes (for example, site-specific codes)
- **B** (B)lank is one of the codes or the only code permitted, even outside the time range specified

**Date 12** Date in CCYMMDD form, with or without a flag (introduced for submissions beginning in 2012).

The following table includes hyperlinks to the NAACCR Volume II (Data Standards and Data Dictionary) definitions for the respective items. STandards for Oncology Registry Entry (STORE); AJCC Cancer Staging Manual, Eighth Edition (8th Edition), Site-Specific Data Items (SSDIs) for collection of site-specific information; NAACCR Guidelines for ICD-0-3 Update Implementation; 2018 Solid Tumor Coding Rules; SEER Summary Stage 2018 Manual to assign Summary Stage; most current SEER Hematopoietic and Lymphoid Neoplasm Database and rules; and SEER*RX systemic therapy application.

Revisions to CoC reporting requirements for 2018 accommodate the transition from Collaborative Stage Site-Specific Factors to the new SSDI and Grade data items, as well as implementation of new data items for the collection of radiation therapy, information associated with sentinel and regional lymph nodes, and cancer recurrence. References to those sources can be found at the respective NAACCR item entries.
