Please identify the major practice gap(s) to be addressed by this activity. A practice gap is the difference between actual performance and ideal performance.

Current Practice (what is)	Best Practice (what should be)	Resulting Gap (difference between current and best practice)
Peri anal fistula repair	New options for treatment include a flap closure and plug treatment.	Higher morbidity including incontinence.
Incisional hernias, biologics and releasing incisions	There are two options for performing releasing incisions.	Currently only one type of releasing incision is being used.
